The integrated library automation system will include Web-based Online Public Access Catalog, Cataloging and Authority Control, Circulation, Serials Controls, and Reporting capabilities. In addition to this core functionality, the system will support integrated searching of print and electronic resources and the inclusion of vendor and third-party supplied content such as images of book jackets, book reviews, reading level data, and author information. Should the Board desire to expand the functionality of the system in the future, the system is capable of supporting Inter-Library Loan, Textbook Management, Classroom Library Management, and Materials Booking. The Vendor will continue to provide implementation services including project management and training services.

**DELIVERABLES:**

Vendor will continue to provide the Library Solution for Schools Software, Licenses, implementation and project management services, installation and configuration of servers, end-user training, data conversion and enhancement services, help desk design and deployment, and software technical support, upgrades and maintenance as required by the Board.

**OUTCOMES:**

Vendor's services will result in:

**Effective Teaching/Instructional Material Integration:** Teachers and librarians can use an integrated library system for a multitude of purposes, from posting reading lists, bibliographies and pathfinders online to creating easy title searches by reading program. Furthermore, library professionals are freed from the time consuming task of manually performing the circulation and cataloging functions of running a library. This change enables them to spend more time working with students and collaborating with teachers.

**Collection Development:** Schools and the Board can use the system to identify collection gaps, determine collection age, and understand resource usage trends, thereby driving better purchase decisions. In addition, librarians can electronically share collection information with other librarians considering similar purchases.

**Library Automation:** An integrated library system will provide benefits on two levels. First, all schools will have a state-of-the-art fully maintained system. Second, a centralized system will relieve librarians and tech coordinators of the time-consuming administrative tasks associated with independent systems, such as the purchasing of systems and servers, installing upgrades and backing-up data. Again, this is valuable time that can now be spent with students.

**Use of Online Resources:** CPS libraries currently invest \$155,000 of grant funds annually in online subscription databases (e.g., Gale/Cengage, Encyclopedia Britannica). An integrated library system will increase the use of these databases, as they can be included in a variety of searches, thereby dramatically expanding the quantity of resources that students use.

**Coordination of Library Technology with other technology in the school:** The centralized system will interface with other district-wide and school databases, such as the Board's student information system, IMPACT. Furthermore, students and educators will be able to access the library from all school classrooms with an internet connection, transforming a basic computer into a virtual extension of the library.

**Grant Applications and Implementation:** Most library grant applications require detailed information about library collections and trends. Furthermore, the ability to be accountable for specific goals is a major driver of success in attaining grants. Without library automation, even basic questions such as "number of books in collection" or "percent increase in circulation" are nearly impossible to answer without a manual count. A centralized system will allow both schools and districts to instantly address these questions with pre-developed reports.

**Coordination of school and public library resources and services:** A centralized system is a prerequisite for coordination among schools and with the public library system, as it enables searching of all schools' and, potentially, the Chicago Public Library's records. In addition, the system can be used to loan resources across the district.
